

JOHN MEEKER

Full-Stack AI Developer | Automation Engineer

+1 (320) 465-2255 @ JohnMeeker413@gmail.com Carbondale, IL, USA

SUMMARY

Senior Full-Stack Developer and AI Automation Engineer with a strong foundation in Computer Science, mathematics, and software engineering. Experienced in designing and building scalable web applications, SaaS platforms, API integrations, automation workflows, and AI-powered solutions. Skilled at transforming business requirements into reliable technical solutions with a focus on performance, maintainability, and business impact

SKILLS

Frontend

React	Next.js	JavaScript	TypeScript	WordPress
-------	---------	------------	------------	-----------

Backend

Node.js	Python	Django	FastAPI	REST APIs
databases	HubSpot	Laravel	PHP	Firebase
MongoDB	PostgreSQL			

AI & Automation

LLM applications	AI agents	RAG systems
AI workflows	automation solutions	

Integration

APIs	webhooks	third-party platforms
data synchronization		

EXPERIENCE

Kayse AI, AI Platform / Intelligent Automation

Industry: SaaS

- Designed and developed AI-driven application workflows integrating modern AI capabilities into business processes
- Built scalable frontend and backend architectures supporting intelligent user interactions
- Integrated AI services and APIs to enable automated decision-making and content generation workflows
- Developed backend systems responsible for data processing, user management, and application logic
- Created responsive interfaces focused on improving user experience when interacting with AI-powered features
- Implemented automation workflows to reduce manual operations and improve efficiency

Rossum AI, Intelligent Document Processing

Industry: Enterprise AI

- Integrated AI-based extraction processes into business systems
- Created backend workflows for document handling and validation
- Connected AI services with enterprise applications
- Improved operational efficiency through automation
- Skills Demonstrated: AI automation, Document processing, Machine learning integration, Enterprise workflows, automated data extraction and processing pipelines
- Built systems improving operational efficiency

HIPAA Certify, Healthcare SaaS / Compliance Platform

Industry: Healthcare Technology

- Developed secure software solutions designed around healthcare compliance needs
- Built workflow automation systems for documentation and compliance processes
- Implemented structured data management approaches
- Created scalable backend systems supporting business operations
- Focused on security, reliability, and maintainability

EDUCATION

Bachelor's Degree in Computer Science

Southern Illinois University, Carbondale

📅 09/2021 - 08/2024 📍 IL, USA

- Bachelor's Degree in Computer Science with a focus on mathematics, algorithms, data structures, and software engineering
- Delivered 100+ bug fixes and dozens of software projects

LANGUAGES

English

EXPERIENCE

Uscreen, Video SaaS Platform

Industry: Creator Economy / Streaming

- Developed solutions related to membership-based digital platforms
- Worked with systems involving user accounts, subscriptions, and content access control
- Built scalable application workflows supporting large user bases
- Integrated third-party services for payments, authentication, and content management
- Improved platform usability and operational efficiency

CheckoutQR, Payment Technology / SaaS

Industry: SaaS

- Developed full-stack components supporting digital transaction workflows
- Built frontend experiences optimized for customer interactions
- Designed backend systems handling business logic and transaction processes
- Integrated payment-related APIs and external services
- Implemented validation and error-handling mechanisms
- Improved reliability and scalability of payment workflows
